

CLAIMS

1. A portable disc player for playing back and recording compact discs, MP-3 discs, DVD, and other similar signal carriers comprising:
 - a. a player body with plan dimensions substantially equal to plan dimensions of a compact disc having a playing mechanism within the body including a spinning capstan for supporting and rotating a disc and a head for reading the disc;
 - b. a lid with plan dimensions substantially equal to plan dimensions of a compact disc, said lid pivotally connected to the player body for movement between a closed position lying flat against the player body and an open position revealing the spinning capstan;
 - c. means for storing at least one compact disc on internal, adjacent to said spinning capstan, side of said lid, so as to be able to hold said stored compact disc in interior of the player apparatus in position substantially parallel to surface of said spinning capstan, when said lid is in closed position.
2. The portable disc player of claim 1 wherein said means for storing discs comprise carrier plates, made of plastics, textile or like material, so as to

be able to carry stored discs in slots arranged between carrier plates.

3. The portable disc player of claim 2 wherein said carrier plates have apertures.

4. The portable disc player of claim 1 wherein said means for storing comprise grooves and ridges, arranged on internal perimeter of said lid, adapted for adjoining ridge of the disc stored.

5. The portable disc player of claim 1 wherein said means for storing comprises central disc holder situate on internal surface of said lid, so as to be able to hold the disc stored by coupling with the central aperture of said disc.

6. The portable disc player of claim 1 wherein said means for storing comprise locking means so as to be able to prevent an undesirable releasing of stored discs.

7. The portable disc player of claim 1 wherein said means for storing discs comprise resilient holding levers adapted for adjoining outer ridge of stored disc so as to be able to prevent an undesirable releasing of stored discs.

8. A portable disc player for playing back and recording compact discs, MP-3 discs, DVD, and other similar signal carriers comprising:

- a. a player body with plan dimensions substantially equal to plan dimensions of a compact disc having a playing mechanism within the body including a spinning capstan for supporting and rotating a disc and a head for reading the disc;
 - b. a lid with plan dimensions substantially equal to plan dimensions of a compact disc, said lid pivotally connected to the player body for movement between a closed position lying flat against the player body and an open position revealing the spinning capstan;
 - c. means for storing at least one compact disc in interior of said body of player apparatus in position substantially parallel to surface of said spinning capstan.
9. The portable disc player of claim 8 wherein said means for storing comprise carrier plates, made of plastics, textile or like material, so as to be able to carry stored discs in slots arranged between carrier plates.
10. The portable disc player of claim 9 wherein said carrier plates have apertures.
11. The portable disc player of claim 8 wherein said means for storing discs comprise locking means so as to be able to prevent an undesirable releasing of stored discs.

12. The portable disc player of claim 8 wherein said means for storing comprise resilient holding levers adapted for adjoining outer ridge of stored disc so as to be able to prevent an undesirable releasing of stored discs.
